

MANUEL ROMERO

PROFESSIONAL SUMMARY

Software Engineer & Product-Minded Builder. Double Degree student (Computer Engineering + Business Administration and Management). Focused on shipping high-impact, scalable solutions that bridge the gap between technical architecture and business utility. Experienced in SaaS development, cloud infrastructure, and building production-ready pipelines. Dedicated to high-quality code, performance, and iterative, data-backed product execution.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL.

AI & Data Science: PyTorch, OpenCV, Pandas. . .

Backend & Cloud: FastAPI, AWS, Docker, Git, REST APIs, CI/CD workflows.

Systems: TCP Sockets, Proxy Servers, Linux, Networking fundamentals.

Product & Engineering Mindset: Product Life Cycle Management, Agile Methodologies, Algorithmic Optimization.

KEY PROJECTS

Proxy System:
Engineered a lightweight TCP proxy to enable server hosting behind CG-NAT and in environments where port forwarding is not viable.

Implemented custom heartbeat / lease protocols to maintain connection stability in low-resource environments.

Urban Traffic Vision:
Built a real-time monitoring pipeline for public urban video feeds.

Processed multi-angle, low-quality imagery using OpenCV and PyTorch for object detection.

Market Sentiment Predictor:
Engineered an end-to-end financial forecasting pipeline: multi-factor technical indicators + NLP news sentiment.

Used Optuna for hyperparameter tuning and ensemble-based uncertainty quantification to forecast excess returns.

Implemented a walk-forward backtesting framework featuring ensemble-based uncertainty quantification and sector-constrained portfolio allocation.

EDUCATION

Double Degree in Computer Engineering & Business Administration and Management
Universitat Politècnica de València (UPV)
Sept 2025 - Present

Competitive Programming (CPUPV): Active member; focused on algorithm optimization and advanced problem-solving under time constraints.

Professional Conservatory Degree (Piano) & Elementary Level (Saxophone): Developed precision focus and discipline under pressure.
Sept 2020 - May 2025

LANGUAGES

Spanish & Catalan (Bilingual)
English (Full professional proficiency)

PROFESSIONAL EXPERIENCE

Founding Engineer at Kinecsis |
Feb 2026 - Present

Architected and deployed a B2B SaaS platform for AI-driven lead generation using FastAPI and AWS.

Developed RAG pipelines with FAISS to ground LLM outputs in real-time data, significantly reducing hallucination rates.

Managed the full product lifecycle: from feature prioritization to production deployment and customer feedback loops.

Currently scaling the platform for the first pilot clients.

Software Developer | Sept 2023 - Dec 2025

Engineered custom software to automate schedule creation and resource management, reducing administrative overhead by 86%.

Collaborated with stakeholders to convert raw business requirements into efficient technical specifications.
